

Incentivesed Data Minesation

Data generation for the next ChatGPT Killer

Intro

Hello everyone

This document documents the created Design System of Demi.
Demi is small Project for the CTRL+Hack+ZK - Hack. The Hack is initialised by Aleph Zero, a Parachain on Polkadot, that aims for speed and security.

We build Demi. Demi stands for Data Minesation.
Its an **Intentivsation Protocoll**.

The Problem is the following:

- Artificial data generation is hard.

The Solution is the following:

- Ai Nodes generate the data on request
- The Data gets judged by another ai, we call it Validators.
- Reward / Punishment Structure ets handled by a Smart Contract

Demi allows Ai Nodes to earn money while generating Data for the next generation of Large Language Models. The Data gets judged by Valdiators. They check the ouput of the Ai Nodes and judge them. The data and the rating gets stored on Chain.

This is highly exirmental. Take everything with a bries of salt.
The idea kicked of the Deita Release end of December, which allows Data Judging.
Please check out the Inspiration.

Back to the Design System. Creating a minimalistic Design System allows to think about Userflow, Interaction, Wireframes, Components, Colors, Typography and more while having a Format to express these thoughts and decision. Thats why this Design System exists.

Cheers 

Typography

<tag>	Name	px
h1	Payton one	36
h2	Payton one	24
h3	Payton one	16
p	Overpass	14

Colors

<Color>	<HexCode>	Short Hand
	#1A1A1A	black-100
	#FFFFFF	white-100
	#E6E6E6	grey-100
	#808080	grey-50

Components

Input Field

A dashed purple rectangular border contains three identical input field components. Each component is a light gray rounded rectangle with a black outline. Inside each rectangle, the word "Placeholder" is centered in a small, gray, sans-serif font.

Button

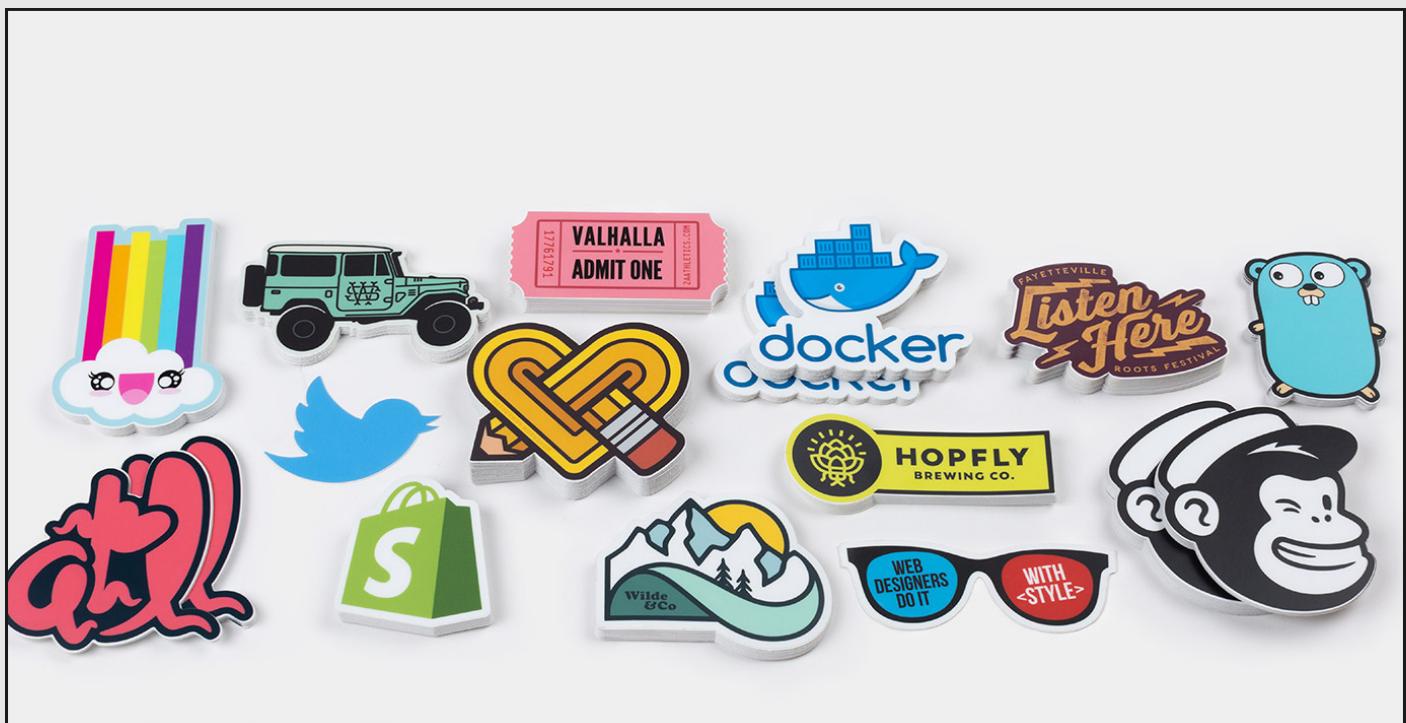

A dashed purple rectangular border contains three identical button components. Each component is a light gray rounded rectangle with a black outline. Inside each rectangle, the text "Click Me" is centered in a bold, black, sans-serif font.

Logo

Inspiration

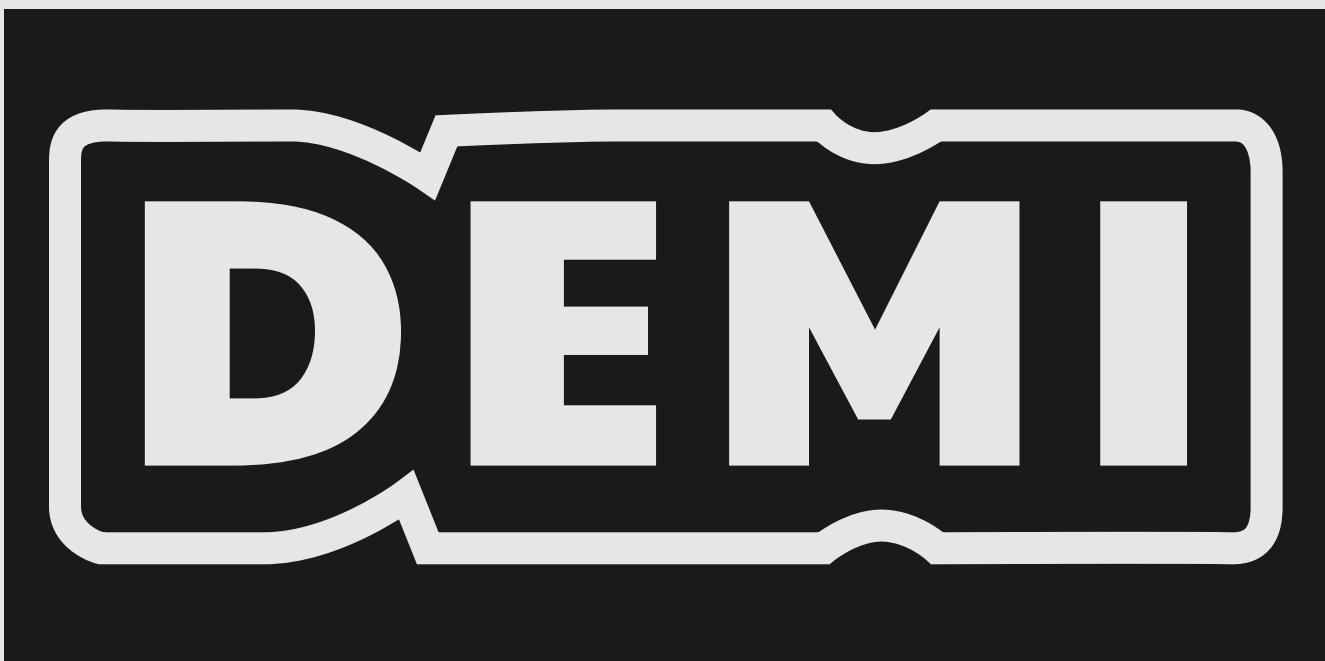

We already set the colorschema to black and whitish to decrease the complexity of this Design System. The first thing which crosses my mind for a simplistic Logo, is a die-cut sticker Design. I'm a Fan of One Piece. There is an influencer who lets his custom Channel Artist creates die-cut stickers and tells a story with these stickers about the latests One Piece Things. The Channel called Grandline Review. You see these Stickers in every Video. Thats where the inspiration comes from.

To fit our needs, i take our wonderful choice of “Paytone One” and create a custom Outline for it. A bit svg magic, does the job.

Logo

Logo - Black

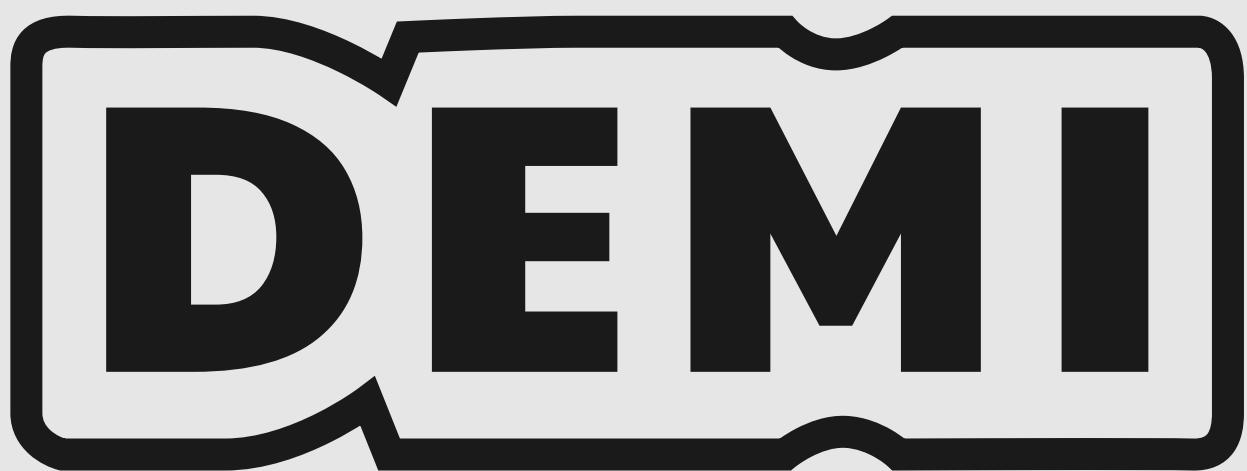

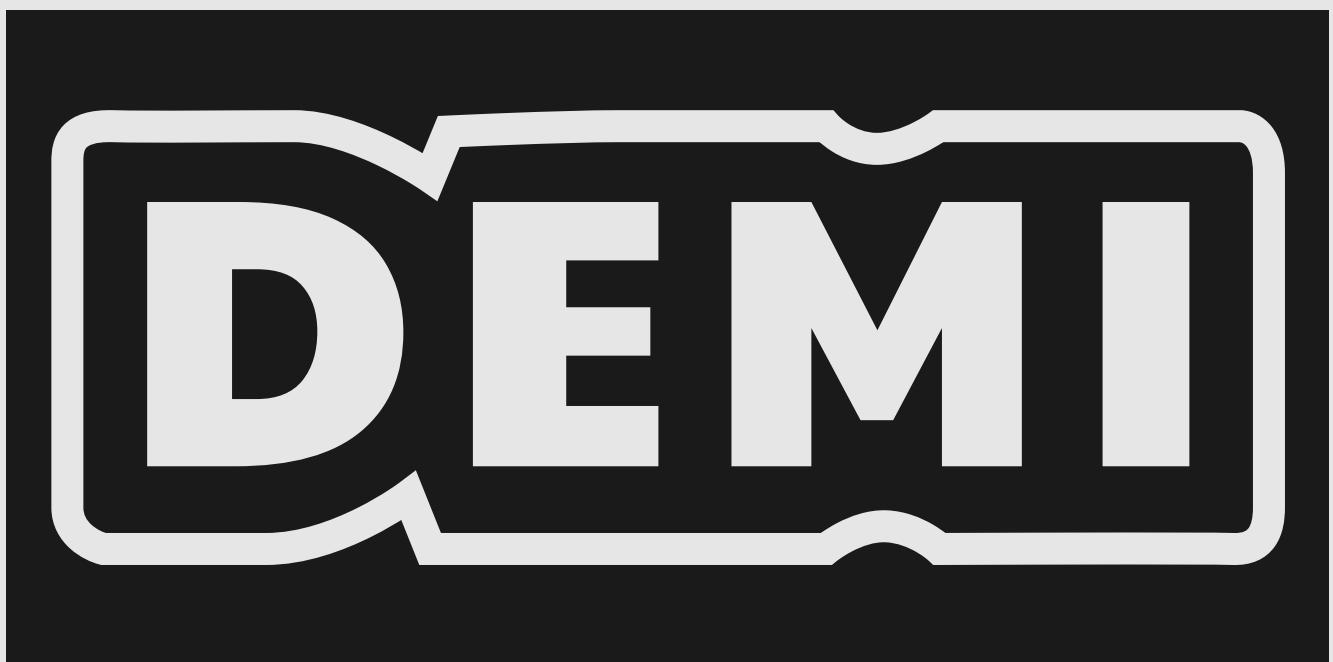

Logo - White

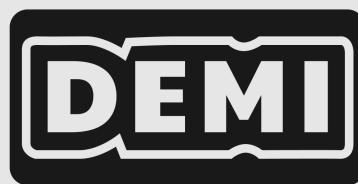

Component - Logo

Logo - Black
